

Hand *Taper*

Taping and bundling of wires and tubes:

ergonomic, efficient and exact with equipment made by **ondal**

Hand Taper:

For all taping and bundling operations at lay-up boards

NEW

The hand guided tool for all taping and bundling operations at lay-up boards is easy to use, ergonomic, lightweight and guarantees perfect and reliable results.

ondal

COMPACT SIZE

LOW WEIGHT

FLEXIBLE USE

The handheld tape tool can be used at lay-up boards for all kinds of taping processes achieving high performance and reliable results. A robust but lightweight design allows long and fatigue-free operation.

The integrated, covered cutting device cuts all tapes and is simple to use. All tape materials can be processed.

The tape roll adjusts itself into the required direction and guarantees optimum quality of the taped surface: Applied with constant tension and free of folds

- ▶ Covered tape cutting device
- ▶ Simple and ergonomic operating
- ▶ High speed because of easy and fast ergonomic movement of the tool
- ▶ Reduced tape consumption because of exact adjustment of the overlap or space

After cutting, the tape is automatically in the right position to start a further process. No additional handling is required

Branches can be passed over. They additionally can be fixed with a number of spot tapes before and after, if required

TECHNICAL DATA

Harness diameter:	3 - 20 mm
Tape width:	9 - 19 mm
Tape roll diameter:	centre 1,5" outside 90 mm max.
Required space harness to board:	100 - 120 mm
Tape materials: (adhesive and non-adhesive)	PVC, cloth, felt and others
